

# NCBI Bookshelf

Free online access to books and documents in life science and healthcare  
[www.ncbi.nlm.nih.gov/books/](http://www.ncbi.nlm.nih.gov/books/)

## What is Bookshelf?

- Bookshelf is a full-text searchable online collection, database, and archive.
- Bookshelf contains online textbooks, reference books, technical reports, systematic reviews, guidelines, documents, and monographs in the life sciences, biomedicine, and healthcare.
- There are over **10,500** titles available!
- The Bookshelf archive preserves content for continued public access and does not publish content itself.
- We rely on volunteer partners and individuals to deposit materials they publish and fund.
- All materials undergo thorough peer review, in addition to NLM's internal scientific and technical review process, before acceptance to Bookshelf.

## Why use Bookshelf?

- All those with an interest in science and healthcare can find relevant information on Bookshelf!
- Students can find some textbooks electronically available.
- Clinicians can find systematic reviews and clinical guidelines from national and international entities such as the Agency for Healthcare Research and Quality (AHRQ) and the World Health Organization (WHO).
- Bookshelf also hosts help manuals for different NCBI and NLM products and links structured reviews like GeneReviews to NCBI resources like PubMed, Genetics Testing Registry, and PubChem.

## Search. Read. Discover.

- Browse and search across all content, or through the content of a singular book.
- Search the archive by keywords, title, first author/editor, publisher, publication year or type.
- You can also explore a book by clicking its title or cover to access its interactive Table of Contents.
